Cybersecurity Analyst | SOC Analyst | SIEM & Security Monitoring | Threat Detection | Information Security

PROFESSIONAL SUMMARY

Early-career cybersecurity professional pursuing an M.Tech in Cybersecurity (Parul University), building on a B.Tech in Information Technology. Hands-on experience with SIEM pipelines, Windows security telemetry, and threat detection through a self-built Purple Team lab (Elastic Stack, Sysmon, MITRE ATT&CK) and structured SOC training (LetsDefend). Strong foundation in network fundamentals (TCP/IP, DNS, HTTP/HTTPS, Wireshark), vulnerability assessment concepts, and security documentation, supported by a background in DevOps/cloud infrastructure (Docker, Kubernetes, AWS, CI/CD) that translates into infrastructure- and container-security awareness. Seeking to apply practical SOC/SIEM skills and information-security fundamentals in a Security Analyst or Cybersecurity Consulting role.

TECHNICAL SKILLS

SIEM & Security Monitoring: Elastic Stack (Elasticsearch, Logstash, Kibana), Sysmon, Winlogbeat, Security Event Analysis, Log Analysis

Threat Detection & Response: MITRE ATT&CK, Threat Hunting, Detection Engineering, Atomic Red Team, Incident Investigation, IOC Analysis

Network Security: TCP/IP, DNS, HTTP/HTTPS, Wireshark, Firewall Concepts, Nmap, Network Traffic Analysis

Security Assessment: Vulnerability Assessment (fundamentals), Burp Suite, Metasploit (lab use), Security Controls, Security Documentation

Cloud & Infrastructure: AWS, Docker, Kubernetes, Minikube, Helm, Terraform, Ansible, Jenkins, GitHub Actions, Linux/Ubuntu

Programming & Scripting: Python, Bash, C++

KEY CYBERSECURITY PROJECT

Purple Team SOC Lab — Security Monitoring & Threat Detection Pipeline

Personal Project

Built an end-to-end SIEM/security-monitoring pipeline (Windows VM → Sysmon → Winlogbeat → Logstash → Elasticsearch → Kibana) to collect, investigate, and visualize Windows security telemetry.

- Analyzed 3,000+ Windows security events across process creation, network connections, file activity, registry modifications, persistence activity, DNS queries, and suspicious PowerShell activity (Sysmon Event IDs 1, 3, 7, 11, 12, 13, 22).
- Simulated and investigated 10+ MITRE ATT&CK techniques using Atomic Red Team, including T1059.001 (PowerShell), T1112 (Modify Registry), T1036 (Masquerading), and T1053 (Scheduled Task/Job).
- Designed threat-hunting workflows and detection logic in Kibana for PowerShell abuse, registry modification, persistence, defense evasion, and suspicious process execution.
- Practiced hands-on network traffic analysis with Wireshark and reconnaissance/vulnerability scanning fundamentals with Nmap to support the detection workflow.

CYBERSECURITY TRAINING

- LetsDefend — SOC Analyst Learning Path: hands-on training in SIEM alert triage, log analysis, and incident investigation.
- Ongoing academic and lab-based practice with SIEM tools, network security concepts, and detection engineering (see Key Project above).
- Certifications: Google Cloud Certifications; Meta Certified Professional — Django Developer.

ACADEMIC RESEARCH

A Systematic Review of Botnet Attacks in Internet of Things (IoT) Networks

Academic Research

- Conducted a systematic literature review on botnet attack patterns, propagation methods, and security implications in IoT networks.

ADDITIONAL EXPERIENCE

LMS Administrator

Parul University

- Managed and organized academic content on the university LMS, supporting students and faculty across multiple concurrent requests.
- Documented processes and troubleshooted platform issues, strengthening documentation, communication, and stakeholder-support skills relevant to security-assessment reporting and client interaction.

EDUCATION

M.Tech in Cybersecurity — Parul Institute of Engineering and Technology, Parul University, Vadodara 2025 – Expected June 2027

Dissertation: "Detection and Analysis of Adversary Techniques Using Sysmon Telemetry and MITRE ATT&CK Framework" (in progress).

B.Tech in Information Technology — Parul University, Vadodara
